DETAILED ACTION

Response to Amendment

The response filed 2/6/03 consists of amending the specification and remarks related to rejection of claims.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over

CRUICKSHANK 6,529,032 in view of WEBSTER 6,195,755.

Regarding claim 1.

CRUICKSHANK discloses an apparatus for blocking an output signal in a first power supply domain (12) from being sent to a second power supply domain (14) when said second power supply domain is in a low power mode.

CRUICKSHANK does not disclose an integrated circuit comprising two power supply domains.

Art Unit: 2836

WEBSTER discloses an integrated circuit comprising two power supply domains (VPS1, VPS2).

It would have been obvious to one having ordinary skill in the art at the time of this invention to include in an integrated circuit of the type comprising at least two power supply domains in which each power supply domain comprises at least one module powered by the same voltage level, an apparatus for blocking an output signal in a first power supply domain from being sent to a second power supply domain when said second power supply domain is in a low power mode to prevent a back drive current from flowing in the circuit when one of the power supply domains is in a low power mode.

Regarding claim 8.

It would have been obvious to one having ordinary skill in the art at the time of this invention to include in an integrated circuit of the type comprising at least two power supply domains in which each power supply domain comprises at least one module powered by the same voltage level, an apparatus for blocking an output signal in a first power supply domain from being received in a second power supply domain when said first power supply domain is in a low power mode to prevent a back drive current from flowing in the circuit when one of the power supply domains is in a low power mode.

Art Unit: 2836

Response to Arguments

3. Applicant's arguments with respect to claims 1, 8 have been considered but are moot in view of the new ground(s) of rejection.

Allowable Subject Matter

4. Claims 15-24 allowed.

5. Claims 2-7, 9-14 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: the prior art does not disclose or suggest to disclose, inter alia, a power sense cell.

Any inquiry concerning this communication should be directed to Robert L. DeBeradinis whose number is (703) 306-5857. The examiner can normally be reached on Monday-Friday from 8:30 am to 5:00 pm.
